

NOAH FRASER

I am a 3rd year, fully self-sufficient, Honours Computer Science and Mathematics student from the University of Guelph looking for hands-on experience as part of a team in the workforce. Interested in working on high-traffic systems with a passion for learning. Educated in full-stack development.

Education

University of Guelph – Honours Bachelor of Computing

- Sep 2024 – Apr 2028
- Relevant coursework:
 - **Data Structures;**
 - Foundational Understanding.
 - **Object Oriented Programming;**
 - System Abstraction and Modular Design.
 - **Algorithm Design and Analysis;**
 - Understanding implementations of common algorithms.
 - **Software Development and Integration;**
 - Lifecycle of a project with multiple languages.
 - **Operating Systems;**
 - Implementing task scheduling and multithreading.

Projects

Every project I do is for the express purpose of learning new skills.

Most of which are school-related:

- **C Backend + Python TUI** based Sokoban-like game (School)
 - This project was my first exploration into working in between languages. This project also introduced me to **iterating** upon an **established codebase** using a **CI/CD pipeline** I developed for testing.
- **GO-lang TUI + Llama3 Custom LLM** for an art piece (Personal)
 - This project is my first experience using **local LLMs** integrated directly into an **app** that I have built. The main goal is to develop a deeper understanding of how to **integrate AI** in more **creative** ways.

Work Experience

Staples Canada – Sales Associate and Design Specialist

- Apr 2024 – present
- Working in a retail environment, I am comfortable fitting into a team setting where new expectations are set daily.
- I have spent time working closely with management to bring new ideas and drive sales store wide.
- Experienced in assessing customer needs and managing various tasks.

Languages:

- C
- Java
- Python
- Go
- HTML/CSS
- JS

Tools:

- Git
- VS Code
- C and Py CI/CD pipelines
- Docker
- Linux

Concepts:

- Data Structures
- Abstraction
- Concurrency/Scheduling
- Iterative Improvement
